

Do your nails  
look healthy?

# Nail Fungus is the leading cause of unhealthy-looking nails.

---

## What should I know about nail fungus?

- A Fungal Nail Infection is a condition that can also be referred to as Onychomycosis (on-ih-koh-my-KOH-sis) or Tinea Unguium.
- Fungi thrive in warm, moist places, such as your shoes.
- Nail Fungus and Athlete's Foot are contagious.
- The first sign of nail fungus may appear as a white or yellow spot under the tip of the toenail. As the fungus grows, it may cause your nail to discolor to yellow, green, or black, thicken, and crumble around the edge.
- Most nail fungus is caused by microscopic organisms called fungi that do not require sunlight to survive. Some of these same organisms also cause Athlete's Foot.
- Without treatment the toenails can become so thick that they cause pressure, irritation and pain, and can spread to adjacent nails and skin.

## Other Nail Conditions

Other conditions like trauma, bacterial and yeast infections, psoriasis and diabetes can cause unhealthy looking nails that will not respond to antifungal treatment alone. The Tolcylen™ Antifungal Solution also contains a combination of cosmetic, hydration and nutritional ingredients that can improve the appearance related to most nail conditions.

## What are my treatment options?

---

- Topical Over-the-Counter Medications
- Topical Medications Dispensed only by a Physician (Tolcylen™)
- Prescription Only Topical Medications
- Prescription Only Oral Medications
- Laser Treatments
- Surgical Procedures
- Combination of the Above Options

### What to expect with Tolcylen™ Solution use:

Anti-fungal ingredients can take several months of daily use before affecting the fungal infections that can cause nail fungus. Once nail fungus has been eliminated, the new, healthy nail growth starts from the cuticle and spreads towards the tip of the nails. Unfortunately, anti-fungal ingredients work well on the skin but do not penetrate the nail surface on their own. Unlike other medications, Tolcylen™ contains several penetrating agents that can provide access to the nail fungus. Tolcylen™ also contains a combination of cosmetic and nail renewal ingredients that are proven to reduce or eliminate discolored, thickened, brittle and unhealthy looking nails, while also providing the nutrients and hydration needed for healthy nail growth. Some patients begin to see improvement in their nail appearance in as little as two weeks. Ask your physician about using Tolcylen™ to prevent re-infections and as a daily nail renewal product. Tolcylen™ Skin cream and Shoe Spray can be used to augment the preventive treatment.

**Discuss your options with your physician to determine the best course of treatment for you.**

# The Tolcylen™ Difference...

What makes Tolcylen™ my best option for a topical treatment?

- Combination therapy eliminates the need for multiple products.
- Patented Tru-Flow™ applicator tip effectively dispenses medication on the nail, the skin around the nail and under the edges of the nail.
- Nail polish can be easily applied over the non-oily, fast-drying formulation.
- Improves appearance and health of nails with fungus, trauma, or other nail conditions.
- Contains no artificial preservatives.

Tru-Flow™  
Applicator Tip

Leak-Proof  
Cap

*Also available from your physician:*

**Anti-microbial Shoe Spray and Anti-fungal Skin Cream**  
to aid in the prevention of recurring fungal infections.

Patent Pending  
Formulation

# The Tolcylen™ Difference...

## **Tolnaftate and Undecylenic Acid:**

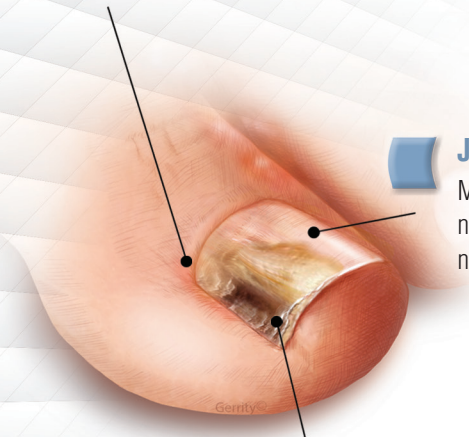

Can prevent and cure fungal infections and act as a cleansing/emulsifying agent and organic preservative.

## **Jojoba Oil and Vitamin E:**

Moisturizes and revitalizes nails, while promoting healthy nail appearance and growth.

## **Urea, Lactic Acid and Propylene Glycol:**

Softens, thins, and lightens brittle and discolored nails while acting as a penetrating agent for the other ingredients.
